Create a procedure, **Deposit_Amt**, to insert a new record in the deposits table.
The procedure should call a **valid_acno** function to check whether the Account number specified for the new deposit exists in the Registration table or not.

1. Create a function called **VALID_ACNO** to validate a specified Account Number and return a BOOLEAN value of TRUE if the Account number exists.

2. Create a procedure called **Deposit_Amt** to add new deposits into the Deposits table. The row should be added to the Deposits table if the VALID_AcNo function returns TRUE; otherwise, alert the user with an appropriate message with the help of RAISE_APPLICATION_ERROR.

   Provide the following parameters for Deposit_Amt procedure:
   Dno, Acno, Damt, Dlocation
